

The House just overwhelmingly voted to pass H.R. 810, the Stem Cell Research Enhancement Act of 2005, by a vote of 238-194. This is a great victory for hope, science and the American spirit. Funding for embryonic stem cell research may help us find cures for diseases like juvenile diabetes, Parkinson's, Alzheimer's and ALS. I am proud to be a leader on this issue. We are investing in hope and we should be proud of that. I want to thank my colleagues for their support over these past few months.
